First sentence. Second sentence. Third sentence. Fourth sentence.

#### 1 Introduction

You can and should cross-reference sections and sub-sections. We use R Core Team (2023) and Wickham et al. (2019).

The remainder of this paper is structured as follows. Section 2....

#### 2 Data

#### 2.1 Overview

Some of our data is of penguins (?@fig-bills), from Horst, Hill, and Gorman (2020).

#### 2.2 Results

Figure 1 illustrates the fluctuation in Toronto's homeless population from 2018 to 2024. The chart shows cyclical rises and falls, with more pronounced declines around 2020 and 2021, followed by a steady recovery. The population reaches its highest point in 2024. Throughout this period, the homeless population varies between approximately 7,500 and 11,000 individuals.

Figure 2 shows the percentage of Toronto's homeless population in each age group as a proportion of the total homeless population from 2018 to 2024. The largest age group is 35-44 years old, accounting for about 21% of the total population, followed by the 25-34 age group

<sup>\*</sup>Code and data are available at: LINK.

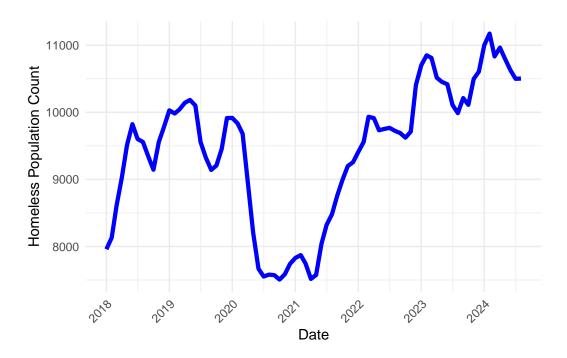

Figure 1: Trend of Homeless Population in Toronto from 2018 to 2024

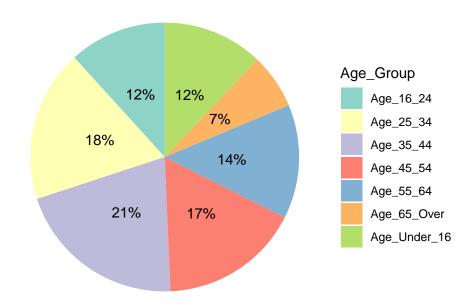

Figure 2: Age Group Distribution of Homeless Population in Toronto (2018-2024)

(approximately 18%), the 45-54 age group (approximately 17%), and the 55-64 age group (approximately 14%). The under 16 and 16-24 age groups each account for 12%. The smallest age group is 65 years and above, making up about 7% of the total population.

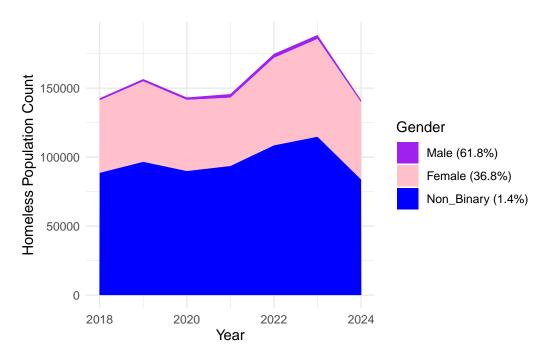

Figure 3: Homeless Population by Gender in Toronto (2018-2024)

Figure 3 presents the gender distribution of Toronto's homeless population from 2018 to 2024. During this period, males have consistently made up the largest proportion, accounting for approximately 61.8% of the total homeless population. Females make up about 36.8%, while non-binary individuals make up about 1.4%. Over time, the total homeless population of each gender has shown similar trends, meaning that the proportion of each gender has remained almost constant.

#### 3 Results

Our results are summarized in ?@tbl-modelresults.

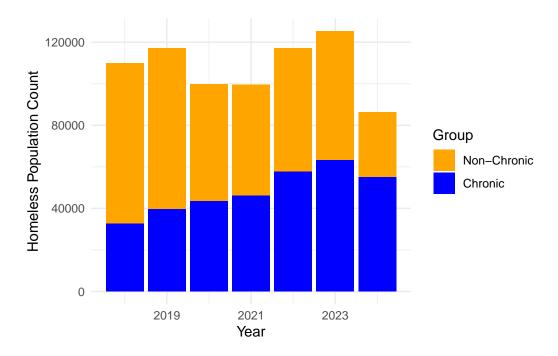

Figure 4: Comparison of Chronic vs Non-Chronic Homeless Population in Toronto (2019-2024)

## 4 Discussion

#### 4.1 First discussion point

If my paper were 10 pages, then should be be at least 2.5 pages. The discussion is a chance to show off what you know and what you learnt from all this.

#### 4.2 Second discussion point

#### 4.3 Third discussion point

#### 4.4 Weaknesses and next steps

Weaknesses and next steps should also be included.

## **Appendix**

#### A Additional data details

### **B** Model details

#### **B.1** Posterior predictive check
